

Forensic technology solutions

investigate . analyse . resolve

With over 30 billion emails sent every day could you find that crucial byte of information?

Today most organisations store their data electronically.

The security and recovery of electronic data has an increasing role to play in both investigations and dispute resolutions.

If you were in a situation where you needed to capture, manage and analyse this data, how would you go about it?

Our team of experts specialise in the capture, management and analysis of this data where the preservation of the evidential integrity is paramount.

We provide clients with the ability to examine electronic data in a legally robust manner, using the same tools and techniques as UK law enforcement agencies and regulatory bodies.

Why should I join the FTS Team?

The FTS practice is growing and offers work across a diverse client base, often working with colleagues abroad. You will work with many different people and on many different projects during your career so if you want to specialise whilst retaining the diversity of a big organisation, this is the perfect opportunity for you.

So.. If you are doing a Computer Science or other technical degree and expect a 2:1 or above you can apply to either an Internship, Business Placement or Full Time Graduate position in our Birmingham or London office.

As part of the Advisory business stream you will find more information on FTS on our PwC website.

To find out more about a career in FTS call 0808 100 1500 or visit www.pwc.com/careers/
