

# G52GRP Semester 2

Peter Blanchfield

# Other Lectures

- 20<sup>th</sup> and 27<sup>th</sup> of March
  - Getting your posters printed
  - Preparing your open day stand
- Also another lecture this term on how the code competition will be marked. Date to be confirmed.

# Now is the time

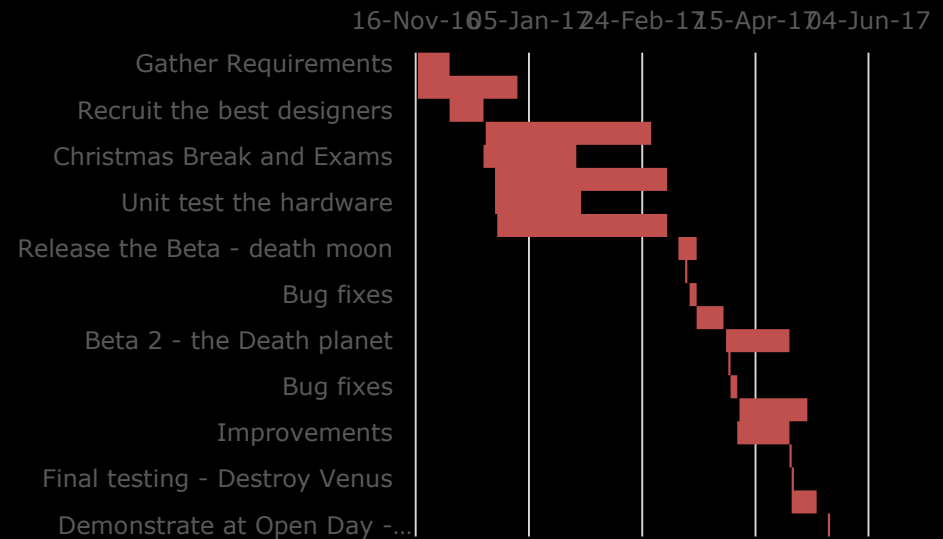

- Please make sure to
  - Meet with your supervisor
    - And if valid your external partner
  - As soon as possible
- If you are not yet ready to start coding you should be
  - So look again at your project plan
  - What are you going to have to change?

# A complaint

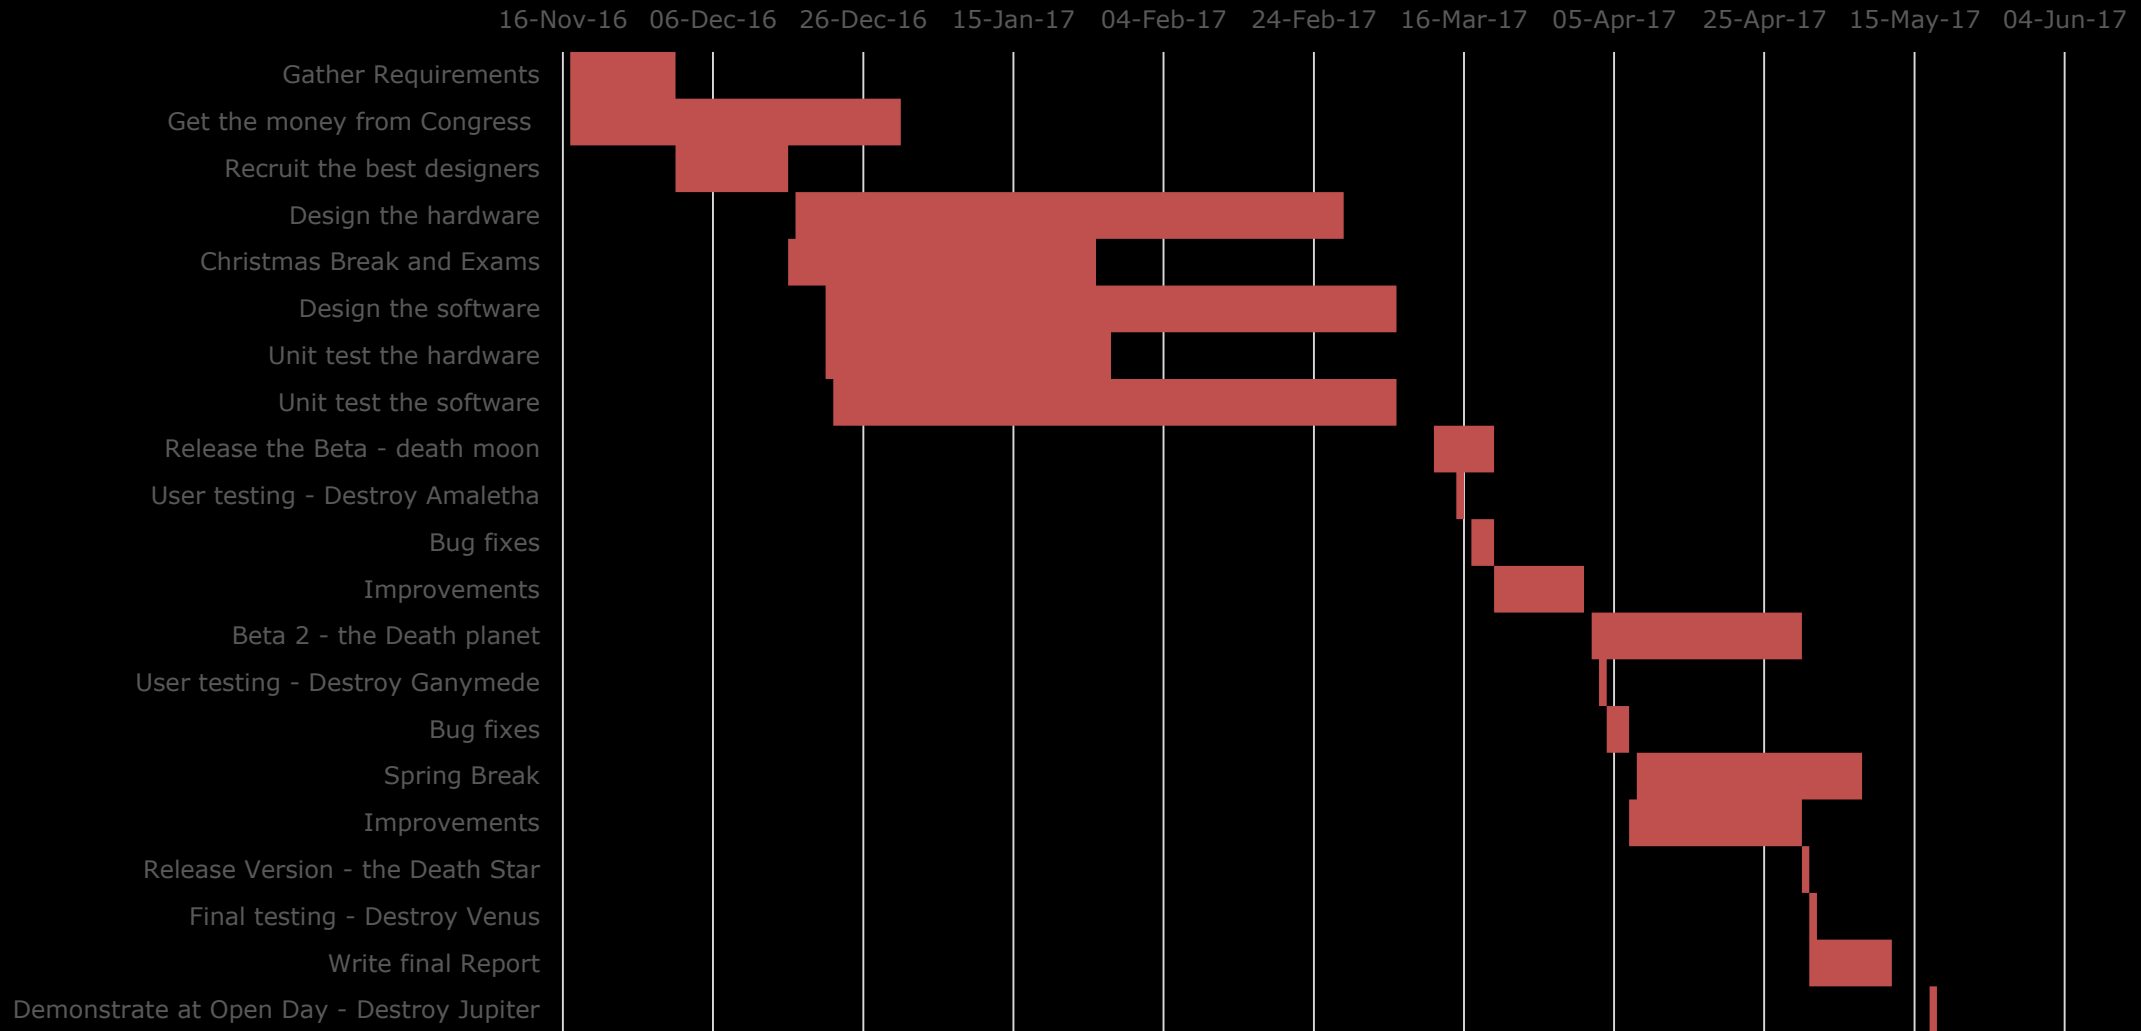

- A Gantt chart is not project management
  - It may be a good way to look at your progress
  - So you can change it

# Project planning

- What did you think a Gantt chart would do for you
- Gantt charts can be produced in 30 minutes
- Here is one for making the Death Star

# You missed a bit

# But what happens when it goes wrong

- The Senate/Congress take three weeks longer than expected
- This pushes back the start date for recruitment
- Which pushes back the build
- And what about when the first Beta test sends Jupiter moon fragments into space and one of those hurtles into earth causing a cataclysmic climate change wiping out the whole of humanity
  - Apart from your team of course who are on the death moon

# Project planning and management

- Use of Trello
  - There will now be a live demo of how to use Trello to plan the building of the Death Star
