COMP2012/G52LAC Languages and Computation Lecture 11 Disambiguating Context-Free Grammars

Henrik Nilsson

University of Nottingham

OMP2012/G52LACLanguages and ComputationLecture 11 - p.1/8

Recap: Ambiguity (1)

A CFG G = (N, T, P, S) is *ambiguous* is there is at least one word $w \in L(G)$ such that there are

- two different *derivation trees*, or
- two different *left-most derivations*, or
- two different right-most derivations

for w.

Recap: Derivation Trees (1)

A tree is a *derivation tree* for a CFG G = (N, T, P, S) iff

- 1. Every node has a label from $N \cup T \cup \{\epsilon\}$.
- 2. The label of the root node is S.

Recap: Ambiguity (2)

meaning for the word.

grammar is ambiguous.

- 3. Labels of interior nodes belong to N.
- 4. If a node *n* has label *A* and nodes n_1, n_2, \ldots, n_k are children of *n*, from left to right, with labels $X_1, X_2, \ldots X_k$, respectively, then $A \to X_1 X_2 \ldots X_k$ is a production in *P*.
- 5. If a node n has label ϵ , then n is a leaf and the only child of its parent.

Ambiguity can be problematic for a number of

Another reason is that many (especially efficient)

reasons, including that the structure of a

derivation tree often is used to suggest a

parsing methods are not applicable if the

Recap: Ambiguity (4)

Consider: 1 + 2 * 3. Two derivation trees:

Disambiguating Grammars

Given an ambiguous grammar G, it is often possible to construct an *equivalent* grammar G'(i.e., L(G) = L(G')), such that G' is *not* ambiguous.

Some languages are *inherently ambiguous* CFLs, meaning that every CFG generating the language necessarily is ambiguous.

We will consider exploiting

- Operator Precedence
- Associativity

to disambiguate expression grammars as an example.

OMP2012/G52LACLanguages and ComputationLecture 11 – p.5/8

Recap: Derivation Trees (2)

- The string of *leaf labels* read from left to right, eliding any *ε*, constitute the *yield* of the tree.
- For a CFG G = (N, T, P, S), a string $\alpha \in (N \cup T)^*$ is the yield of some derivation tree iff $S \stackrel{*}{\Rightarrow} \alpha$.
